

Acousti-Seal Encore Micro-Perf[®]

Introducing the Next Generation of Sound Absorption.

Modernfold proudly presents Acousti-Seal Encore Micro-Perf, our most advanced, sound-absorption operable wall panel yet.

Independently certified and built on the proven Acousti-Seal Encore platform, this innovation combines exceptional sound blocking and sound absorbing properties in one industry-leading solution.

.95 NRC

Acousti-Seal Encore Micro-Perf[®] panel covered with one of two acoustical covering lines achieved a .95 NRC.

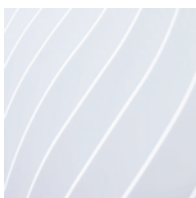

49 STC

Full wall-to-wall assembly is certified at 49 STC.

51 STC

Full wall assembly sealed to the back of a storage pocket using a pocket door is certified at 51 STC.

It is important to note that standard, backed-fabric coverings dramatically diminish sound absorption and wall performance. The NRC rating of .95 is only achieved with carpet and acoustical coverings.

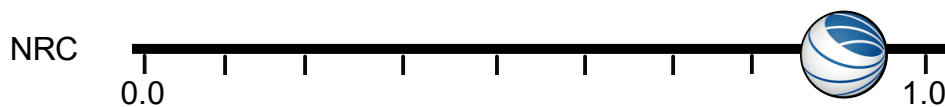

Acousti-Seal Encore Micro-Perf[®]

The Science of Sound

The Noise Reduction Coefficient (NRC) measures how much sound is absorbed by a panel surface, using a scale from 0 to 1.

An NRC of 0 means the surface reflects all sound, contributing to a noisy environment with poor speech clarity. An NRC of 1 indicates the panel surface absorbs all sound, creating a quieter space with enhanced speech clarity.

Hear the difference for yourself!

Whether designing a

- convention center,
- school classrooms,
- gymnasium,
- restaurant,
- hospitality venue, or
- office

you can rely on Modernfold's industry-leading, independently-certified Acousti-Seal Encore Micro-Perf's performance to create quieter, more comfortable spaces. Multi-purpose buildings now can support various functions simultaneously maximizing the flexibility of your space. **Contact a Modernfold Distributor today.**
